MEASAT Develops New Customer Teleport

KUALA LUMPUR, 24 August 2004 – Binariang Satellite Systems Sdn. Bhd. (“MEASAT”) announced today the development of a new satellite control center and customer teleport in CyberJaya, near Kuala Lumpur, Malaysia.

The new MEASAT KL Teleport will work with the existing MEASAT TT&C facility in Langkawi, Malaysia, to provide fully redundant satellite control facilities for the MEASAT fleet of satellites. The new facility has also being designed as a fully equipped customer teleport facility to provide a complete range of up-linking, satellite and co-location services to customers in the Broadcasting, Telecoms and IP sectors.

“The development of the KL Teleport is a key element in our plan to support the launch of MEASAT-3 in 2005 and develop MEASAT into a full services satellite solutions provider serving the wider Asia-Pacific region” said Paul Brown-Kenyon, Vice-President of Sales and Marketing. “The facility has been designed to support our local, regional and international customer base with a full range of professional value added services. It will provide broadcasters with playout and up-linking facilities, VSAT operators with co-location facilities and telecom operators with redundancy and IP connectivity.” continued Paul Brown-Kenyon. “We are already in discussions with a number of local and international customers over the use of this facility and the services it offers”

Scheduled to open in November 2004, the KL Teleport will be equipped with a satellite antenna farm over 15 antennas providing C and Ku-band connectivity to the MEASAT satellite network and other region video hot-birds. Designed with redundant fibre connectivity to local, regional and global POPs the teleport will be fully integrated with the terrestrial network. In addition, with secure customer rack and office space, supported by triple redundant services, the facility has been designed to provide full customer co-location or redundancy services.

About MEASAT

The MEASAT satellite network, owned and operated by Binariang Satellite Systems Sdn Bhd, is a premium provider of satellite communication services to Asia’s leading broadcasters, telecommunications providers and DTH operators. The MEASAT system today serves customers in South East Asia, IndoChina, South Asia and Australia. The launch of MEASAT-3 in mid 2005 will provide customers with a satellite capable of reaching 70% of the world’s population through a single high powered C-band beam. Co-located with

MEASAT-1 at 91.5°E, MEASAT-3 will also provide customers with in-orbit redundancy for both C and Ku-band services.
